## **1 Investigation of RNA virus genome structure 1**

*A.J. Easton, A.C. Marriott and C.R. Pringle*

- 1 Introduction—the nature of the virus genome 1
  - Properties of the genomes of RNA viruses 3
  - Properties of the virions of RNA viruses 3
  - Paradigm for analysis of RNA virus genome structure 8
- 2 Growth, assay, and purification of RNA viruses 8
  - Source of virus: *in vivo* versus *in vitro* methods 8
  - Assay of virus yield 9
  - Harvesting and concentrating of virus 9
  - Purification of virus 10
    - Rate-zonal gradient centrifugation 10
    - Isopycnic gradient centrifugation 11
  - Radiolabelling 12
- 3 RNA extraction 12
  - Genome RNA extraction from virions 13
  - Genome RNA extraction without virion purification 15
- 4 Fractionation of RNA, and analysis by Northern (RNA) blotting 16
  - Fractionation of RNA 16
  - Northern blotting and detection with labelled probes 17
- 5 Further analysis 19
  - Characterization by restriction-endonuclease digest patterns 19
  - Characterization by ribonuclease protection 20
- References 22

## **2 Mutagenesis of RNA virus genomes 23**

*W.S. Barclay and J.W. Almond*

- 1 Introduction 23
- 2 Generation of RNA virus mutants 26

## CONTENTS

- Selection of mutants from the RNA quasispecies 26
- Recombination of RNA virus genomes 28
- Reassortment of segmented RNA virus genomes 28
- Generation of defective RNA virus populations by passage in culture 31
- Recovery of RNA virus mutants from infectious cDNA 32
  - Site-directed mutagenesis of infectious clones of RNA virus genomes 32
  - Recovery of virus from infectious cDNA 35
  - Transfection of RNA replicons 36
- 3 Determining the genotype of RNA virus mutants 37
- 4 Analysis of the frequency of RNA virus mutants 39
- References 41
  
- 3 Analysis of transcriptional control in RNA virus infections 43**
  - S. Makino*
  - 1 Introduction 43
  - 2 Analysis of virus mRNAs in virus-infected cells 43
    - General considerations 43
    - Radiolabelling and extraction of virus RNAs 44
    - Gel electrophoresis of RNAs 46
      - Glyoxal gel electrophoresis 46
      - Formaldehyde gel electrophoresis 47
  - 3 Analysis of virus mRNA structure 48
    - General considerations 48
    - Separation of virus RNA in preparative agarose gels 49
    - Extraction of virus RNA from gel slices 50
    - One-dimensional oligonucleotide fingerprinting 53
    - Northern blot hybridization 54
  - 4 The use of RNA reporter constructs for transcriptional assays 55
    - RNA transcription *in vitro* 57
    - RNA transfection of DI RNA construct and helper virus infection 59
    - DNA transfection and vaccinia virus infection 60
    - CAT reporter assay system 62
    - Detection and quantitation of minute amount of virus RNAs 63
      - Quantitative RT-PCR 63
      - RNase protection assay 65
  - References 66
  
- 4 Analysis of RNA virus-encoded proteinases 69**
  - M.D. Ryan, M. Flint, M.L.L. Donnelly, E. Byrne and V. Cowton*
  - 1 Introduction 69
  - 2 Defining the proteinase type 70
    - Inhibitor studies 70
    - Sequence analysis 70
      - Sequence motifs 70
      - Sequence alignments 71

- 3 Delimiting the proteinase (domain) 71
  - Deletion/truncation analysis 71
  - Screening for proteolytic activity using translation systems *in vitro* 74
    - Uncoupled translation systems 75
    - Coupled transcription/translation systems 77
    - Translation systems and interactions *in trans* 77
    - Rapid analysis of site-directed mutants 79
- 4 Bacterial expression 80
  - Expression of inactive proteinase 80
  - Affinity 'tagging' 81
  - Insolubility of expressed proteinases 81
- 5 Substrate specificity 82
- 6 Artificial 'reporter' polyproteins 82
  - References 84

## 5 Detection and analysis of host gene targets for oncogenic retroviruses 85

*J.C. Neil and A. Terry*

- 1 Introduction 85
- 2 Insertional mutagenesis 86
  - Analysis of virus integration patterns 87
  - Cloning of virus integration sites 89
  - Analysis of host DNA flanking the provirus integration sites 93
  - Location of genes at integration sites 96
- 3 Transduction of virus oncogenes 99
  - Properties of transducing viruses 99
  - Biological methods of detection 100
  - Molecular methods of detection 101
- References 102

## 6 Analysis of RNA virus quasispecies 105

*J.K. Ball*

- 1 Virus quasispecies 105
- 2 Choice of analytical method 107
- 3 Nucleic acid extraction 107
  - Reverse transcription of virus RNA 110
  - The polymerase chain reaction as a tool for quasispecies analysis 112
  - Polyacrylamide gel electrophoresis 115
  - Methods for labelling and staining DNA 119
- 4 Single-stranded conformation polymorphism analysis 122
  - Heteroduplex and quantitative heteroduplex tracking analyses 124
  - Length polymorphism analysis (LPA) 127
  - Point mutation assays 128
- 5 Sequence analysis 132
  - Sequence manipulation and phylogenetic analyses 138
- References 139

## CONTENTS

### **7 *In vitro* replication of RNA viruses** 141

*R. Banerjee, M. Igo, R. Izumi, U. Datta and A. Dasgupta*

- 1 Introduction 141
  - 2 *De-novo* synthesis of poliovirus 142
    - Isolation of poliovirus genomic RNA 142
    - HeLa S10 extract preparation 144
    - Translation initiation-factor preparation 145
    - Coupled transcription and translation 146
    - Poliovirus plaque assay 146
  - 3 Expression of virus proteins with enzymatic and RNA binding activities 147
  - 4 RNA binding assays 152
    - In vitro* transcription for labelled probe preparation 152
    - Labelled nucleoprotein complex formation 157
      - Gel shift assay 158
      - UV-crosslink analysis 158
    - Northwestern analysis 167
    - Western analysis 168
  - 5 Membrane binding of virus proteins 171
    - Indirect immunofluorescence 171
    - In vitro* membrane binding assay 175
- Acknowledgements 177  
References 178

### **8 Packaging of segmented and non-segmented RNA virus genomes** 179

*J. Barr and J.W. McCauley*

- 1 Introduction 179
    - Assembly and packaging defined 179
    - Genome selection 180
  - 2 Genome packaging in non-segmented, negative-strand RNA viruses 180
    - Investigation of genome packaging: analysis of nucleocapsid RNA polarity before and after packaging into virions 181
  - 3 Introduction of site-specific mutations in the genome of negative-strand viruses 188
  - 4 Influenza virus genome packaging 190
- References 199

### **9 RNA virus reverse genetics** 201

*A. Bridgen and R.M. Elliott*

- 1 Introduction 201
- 2 Model systems for the manipulation of RNA viruses 203
  - Transient expression system 204
  - Transfection and electroporation techniques 205
  - Choice of expression system 207
  - Generation of RNAs containing authentic 5' and 3' termini 208
- 3 Synthesis of RNA templates 208

- 4 Purification/synthesis of virus proteins required for replication 210
- 5 Rescue of infectious virus 213
- 6 Creation of mutant viruses 216
- 7 Analysis of mutant phenotypes 220
  - Genomic studies of the virus mutants 220
  - Phenotypic studies 223
- 8 Technical and ethical issues 224
- 9 Perspectives 224
  - References 225

## **10 Development of RNA virus vectors for gene delivery 229**

*B.A. Usmani, A. Fassati and G. Dickson*

- 1 Introduction 229
- 2 Vectors based on murine retroviruses 230
  - Design and choice of MoMLV retrovirus vectors 231
    - Single-gene MoMLV vectors 231
    - MoMLV vectors expressing multiple genes 231
    - Tropism of MoMLV retrovirus vectors 232
  - MoMLV packaging cell lines 233
  - MoMLV vector production 234
  - Titration of MoMLV virus vector stocks 237
  - Concentration of MoMLV virus vector stocks 239
  - Detection of replication-competent MoMLV (RCR) vector contamination 239
  - Infection of target cells *in vitro* with MoMLV vectors 240
  - Direct transduction of target cells *in vivo* with MoMLV vectors 242
- 3 Retrovirus gene transfer vectors based on lentiviruses 243
  - Lentivirus vector sources and design 245
  - Packaging and pseudotyping constructs for lentivirus vectors 247
  - Production and concentration of recombinant vector 248
  - Ex vivo* and *in vivo* transduction 251
  - Safety considerations in the use of lentivirus vectors 252
  - References 254
